

# P.I.P. Sanitary Mask

A new evolution in sanitary protective masks

Pole Ideal Pars

## Why should we use protective masks?

There are so many diseases and infections that can be transmitted through oral secretions which can be prevented by using protective masks. These masks both prevent user's oral secretions to be scattered in the air and the airborne particles enter user's mouth and respiratory tract.

According to the importance of protective masks in preventing disease prevalence and in line with promoting the national health, P.I.P. has produced protective masks which are totally different from the previous models and has provided a new definition of masks.

## What makes this mask distinguishable?

### Transparency

A part of our understanding of what people say pertains to watching their facial expressions and lip movements. The transparency of these masks not only allows seeing people's mouths, but they also have a psychologically positive impact on conversations, thus masks are no longer considered as a veil that covers the user's face.

### Easy Respiration

One of the problems with conventional masks is the unpleasant conditions for breathing. This problem becomes even more serious for the users with Asthma. But the design of P.I.P. Sanitary Masks provides easy and normal breathing for the user.

### Easy and Comfortable to Use

One of the specifications of this device is its ease of use and it is designed in a way that user can wear it with no discomfort for several hours. Using these masks neither interrupts using glasses, nor it disarranges the user's make up.

### Cleanable and Reusable

User can easily clean the mask and use it over and over again which makes it economical.

## Recommended Places for Application

Hospitals, dental clinics, veterinary clinics, laboratories, food manufacturing factories, department stores, schools, universities, expressway rest stops, hotels, restaurants, cleaning services centers, garrisons etc.
